

**We can disperse your fears about
dazzle, shadows and uneven light.
With LS.**

Translucent
panels

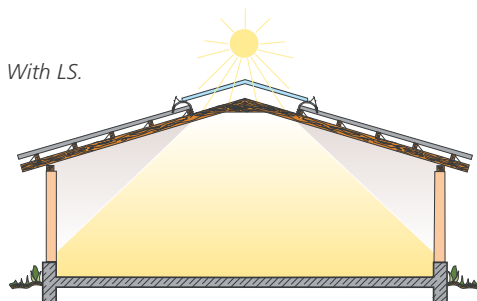

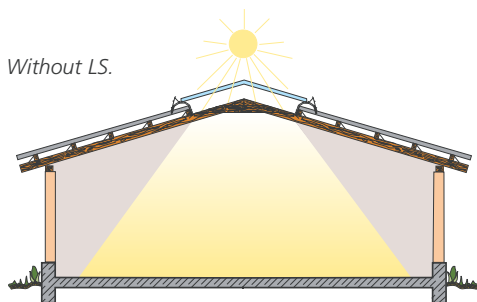

without LS

with LS

The high point for all FDT translucent panels: your building.

The enhanced light-dispersing version LS.

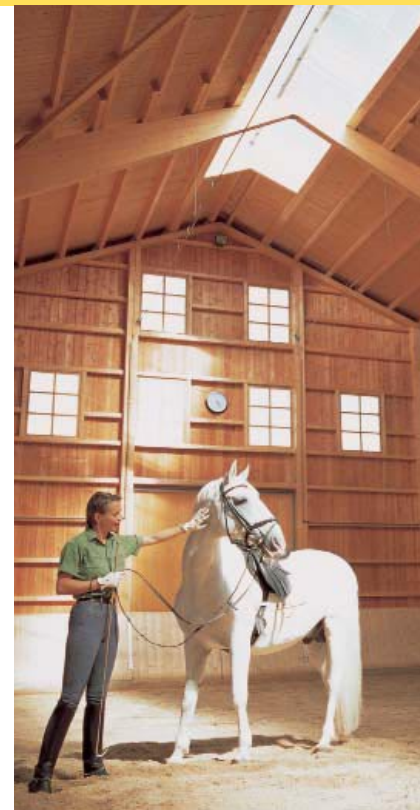

Whether **Rhenoplast**, **Rhenalux**, **Rhenotop** or **Rhenatherm**: All our translucent panel systems are available with light-dispersing features. Daylight is dispersed as if through a thousand tiny lenses – mild and wide.

You will see and feel the difference, this is no wild exaggeration but based on scientific facts. Dazzling effects are almost totally removed, while the illumination angle becomes significantly wider, reaching even the remotest corners of your building.

And despite the enormous light efficiency, nobody breaks into a sweat: the designers of LS have managed to significantly reduce the development of heat inside the building.

LS. Dazzling in every respect. Except literally!

With **LS**, you avoid the shadows which horses used to shy at.

QUICK-CHECK

- almost dazzle free
- avoidance of cast shadows
- wider illumination
- reduced development of heat
- available for all FDT translucent panel products
